HD-ULTRA 2.0

Ultra-flat HDMI cable

The new High Definition video sources brings us to introduce the new generation of HDMI.
The HD ULTRA version 2 offers new performance in terms of resolution and frequency up to 4k in @60Hz, compatible HDR, YUV 4 : 4 : 4 and 18 GB/s. The link is optimized by spacing data channels that are anymore concentric but side by side. This is to reduce interference within the cable.

The very flexible flat cable and the very compact plugs facilitate the connections on flat screens, without any compromise on the quality. It will be the best link of your Ultra High Definition video sources.
